

Muhammad Rizwan

Software Engineer | Applied AI, RAG & Agentic Systems

Remote (UTC+5) | xrizwanr@gmail.com | <https://www.linkedin.com/in/muhammad-rizwan-3886511b9/>

PROFESSIONAL SUMMARY

Software engineer with 5+ years building production web platforms and recent professional training in RAG, agentic AI, NLP, and LLM application development. Combines Python and full-stack engineering with coursework in semantic search, vector databases, transformers, tool-using workflows, and evaluation.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C#, SQL

Applied AI: RAG, agentic workflows, LLMs, transformers, semantic search, vector databases, embeddings, retrieval evaluation, tool use, structured workflows

ML & NLP: TensorFlow, PyTorch, scikit-learn, NumPy, NLP, word embeddings, sequence models, attention, supervised learning, unsupervised learning, model evaluation

Hugging Face: Transformers, Datasets, Tokenizers, Accelerate, model inference, fine-tuning

AI-Assisted Development: Claude, Claude Code, OpenAI Codex, Gemini, Cursor, AI pair programming, agentic coding workflows, prompt engineering, AI-assisted code review

Full-Stack Engineering: React, Vue.js, Node.js, Express.js, ASP.NET Core, REST APIs, GraphQL, PostgreSQL, MongoDB, Docker

RELEVANT APPLIED AI COURSEWORK

- Completed coursework in retrieval-augmented generation covering retrieval pipelines, semantic search, vector databases, and grounded generation.
- Studied agentic design patterns including reflection, tool use, planning, multi-agent workflows, evaluation, and error analysis.
- Completed the NLP Specialization covering word embeddings and vector-space search, sequence models, and attention-based encoder-decoder architectures for translation, summarization, and question answering.
- Completed the Hugging Face LLM Course covering transformers, tokenization, inference, fine-tuning, NLP tasks, and model sharing.

PROFESSIONAL EXPERIENCE

Frontend Engineer | Worklio

Nov 2022 - Present

- Developed WageTime and Worklio's embedded, white-label payroll and HR solutions across React and Vue frontends, shared TypeScript SDK and UI packages, and C#/.NET APIs.
- Built complex scheduling workflows covering recurring schedules, employee and team assignments, daily, weekly, and monthly calendars, schedule changes, conflict review, and time-off-aware coverage.
- Contributed to ASP.NET Core REST APIs and supporting API-model and business layers, coordinating frontend and backend contracts across WageTime modules.
- Delivered workforce features spanning Time & Attendance, timesheets and timecard rules, Time Off, company and holiday calendars, Pulse Surveys, Net Promoter Score (NPS), absence analytics, tasks, and earned-wage access.

Full-Stack Software Developer | GitStart

Oct 2021 - Nov 2022

- Architected backend services with Node.js, Express.js, and PostgreSQL for scalable, reliable web products.
- Built React and Next.js interfaces and integrated them with backend APIs across client and open-source projects.
- Served as the primary code reviewer for a distributed team, enforcing quality standards and guiding implementation decisions.

Full-Stack Software Developer | Avybe

Aug 2020 - Jul 2021

- Designed secure, scalable backend APIs and integrated them with frontend workflows.
- Integrated PayPal and Stripe using webhooks for real-time transaction updates and payment processing.
- Reduced load times in an existing mobile application by 30% through code refactoring and performance tuning.

RELEVANT APPLIED AI CREDENTIALS

Agentic AI | DeepLearning.AI | Jul 2026

Retrieval Augmented Generation (RAG) | DeepLearning.AI | Jul 2026

Natural Language Processing Specialization | DeepLearning.AI | Aug 2026

LLM Course | Hugging Face | Completed
